

# Finishing Syntax, Starting Semantics

A number of kinds of restrictions on movement have been unified into a single condition: **Shortest Move**:

When several different movement operations are in principle possible, pick the **shortest\*** one

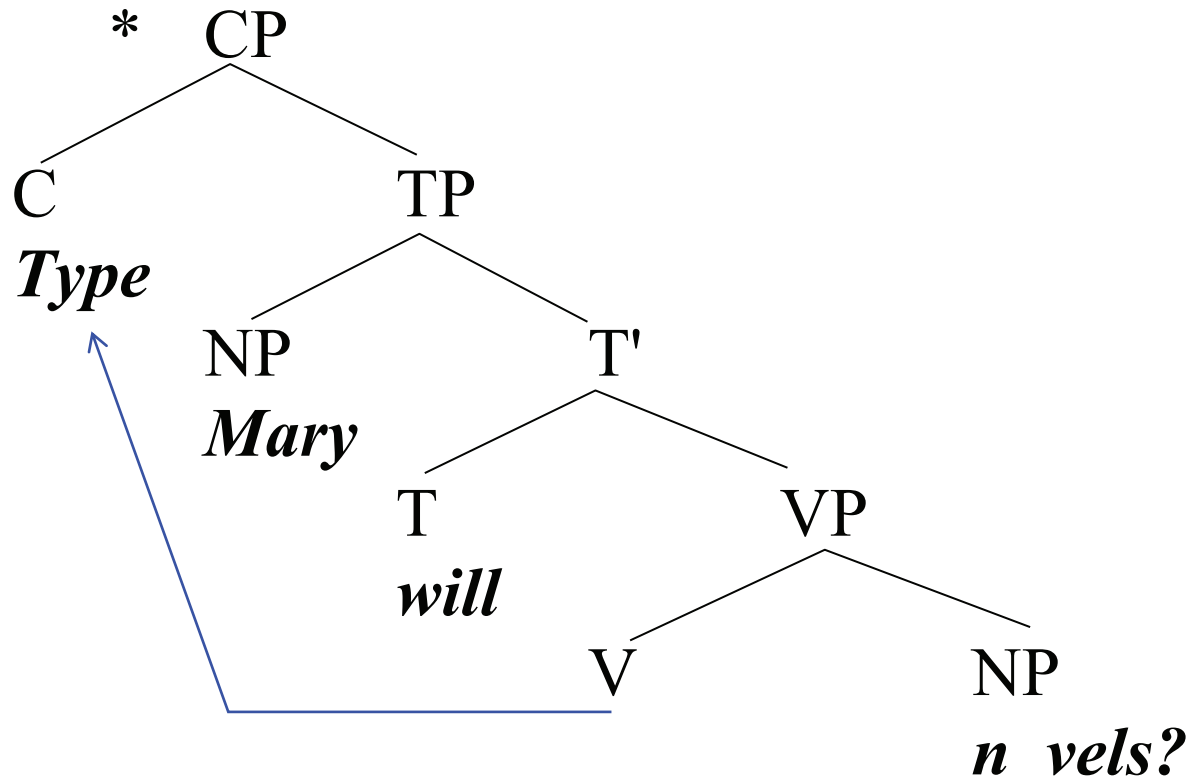

**\*shortest**: let the **path** of a movement be the set of nodes that dominate the original position of the moved item, and do not dominate the landing site.

Movement A is shorter than movement B if the path of A contains a smaller number of nodes than the path of B.

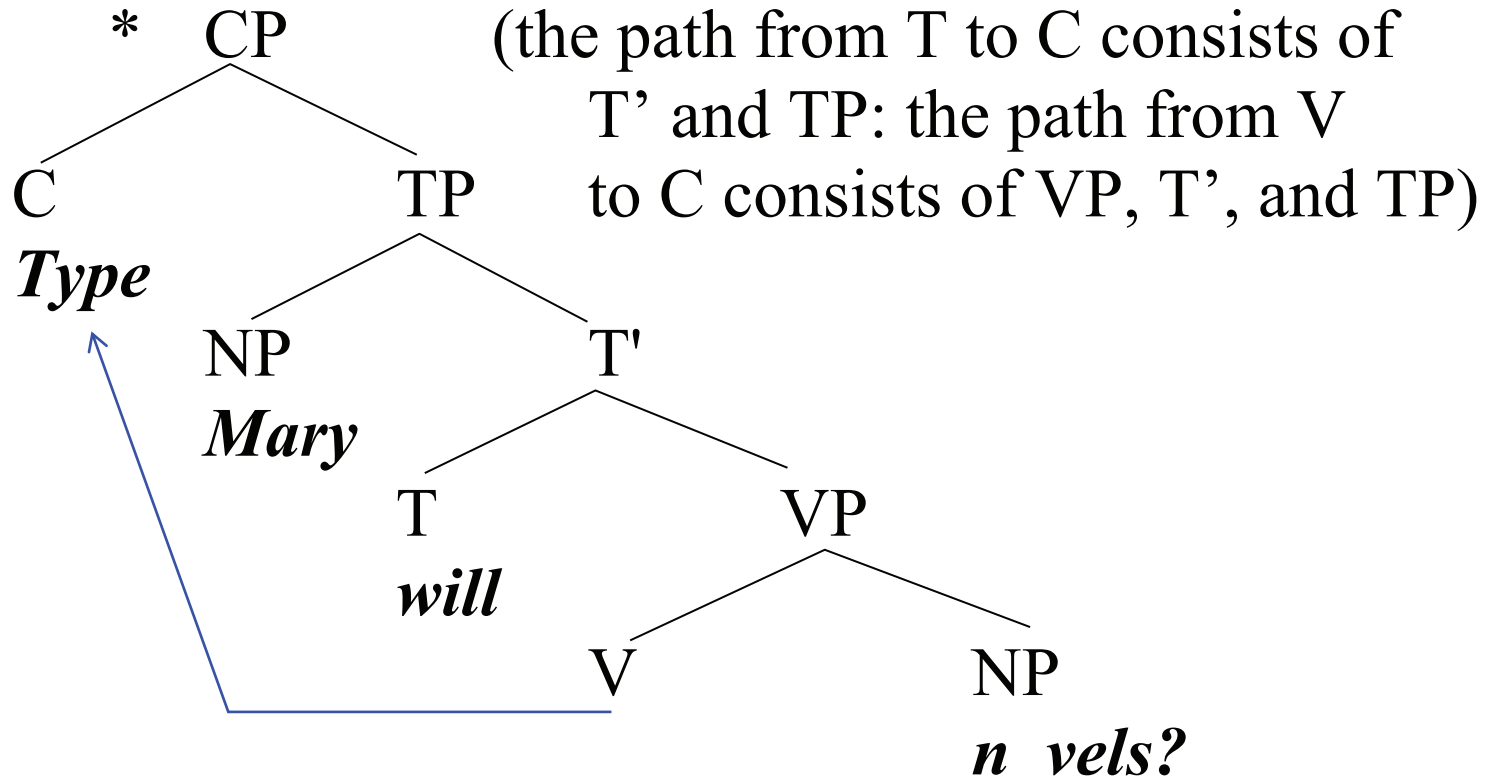

# Shortest Move, case #1: the Head Movement Constraint

# Shortest Move, case #1: the Head Movement Constraint

# Shortest Move, case #1: the Head Movement Constraint

## Shortest Move, case #2: Superiority

**Who** \_\_\_ bought **what**

\***What** did **who** buy \_\_\_ ?

**What** did you give \_\_\_ to **whom**

\***Who** did you give **what** to \_\_\_ ?

## **Shortest Move, case #3: wh-islands**

I wonder [**what** Bill gave \_\_\_ to Fred.]

## Shortest Move, case #3: wh-islands

I wonder [**what** Bill gave \_\_\_ to Fred.]

\***Who** do you wonder [**what** Bill gave \_\_\_ to \_\_\_]?

## Shortest Move, case #3: wh-islands

I wonder [**what** Bill gave \_\_\_ to Fred.]

\***Who** do you wonder [**what** Bill gave \_\_\_ to \_\_\_]?

two things potentially wrong with the green arrow...

## Shortest Move, case #3: wh-islands

I wonder [**what** Bill gave \_\_\_ to Fred.]

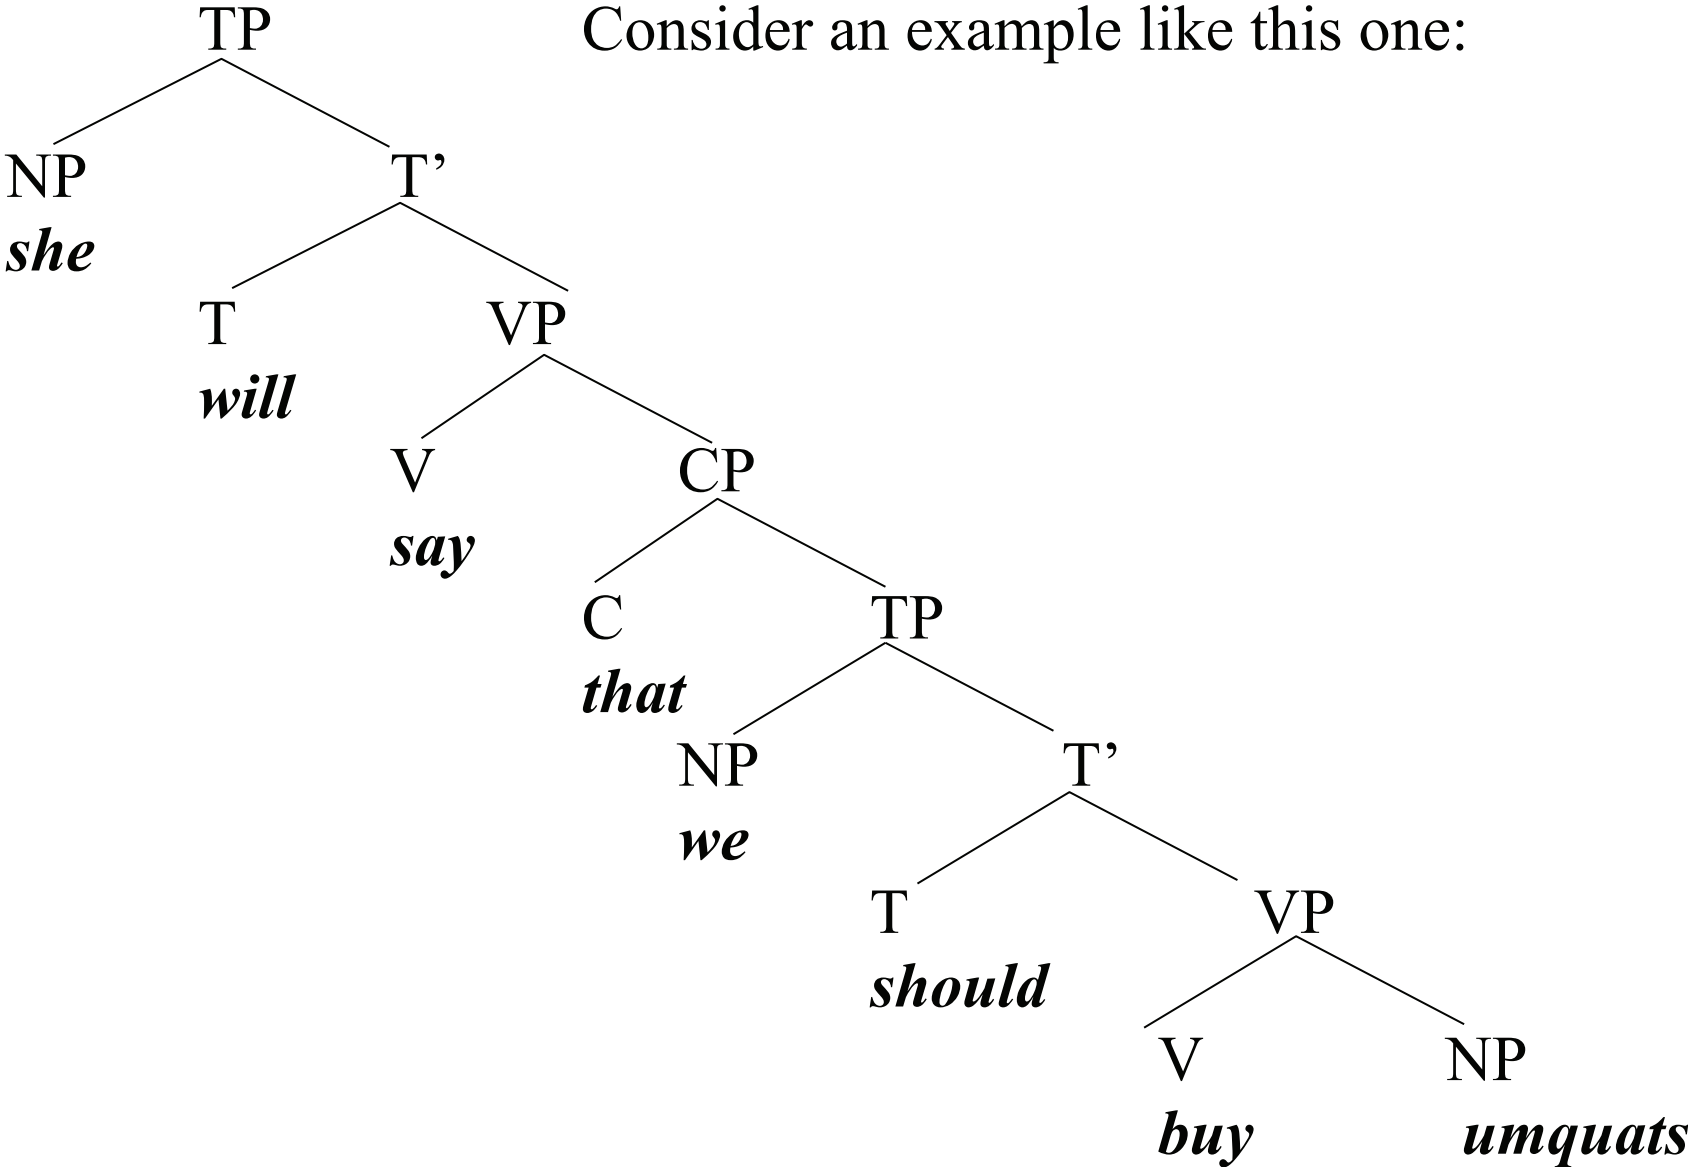

\***Who** do you wonder [**what** Bill gave \_\_\_ to \_\_\_]?

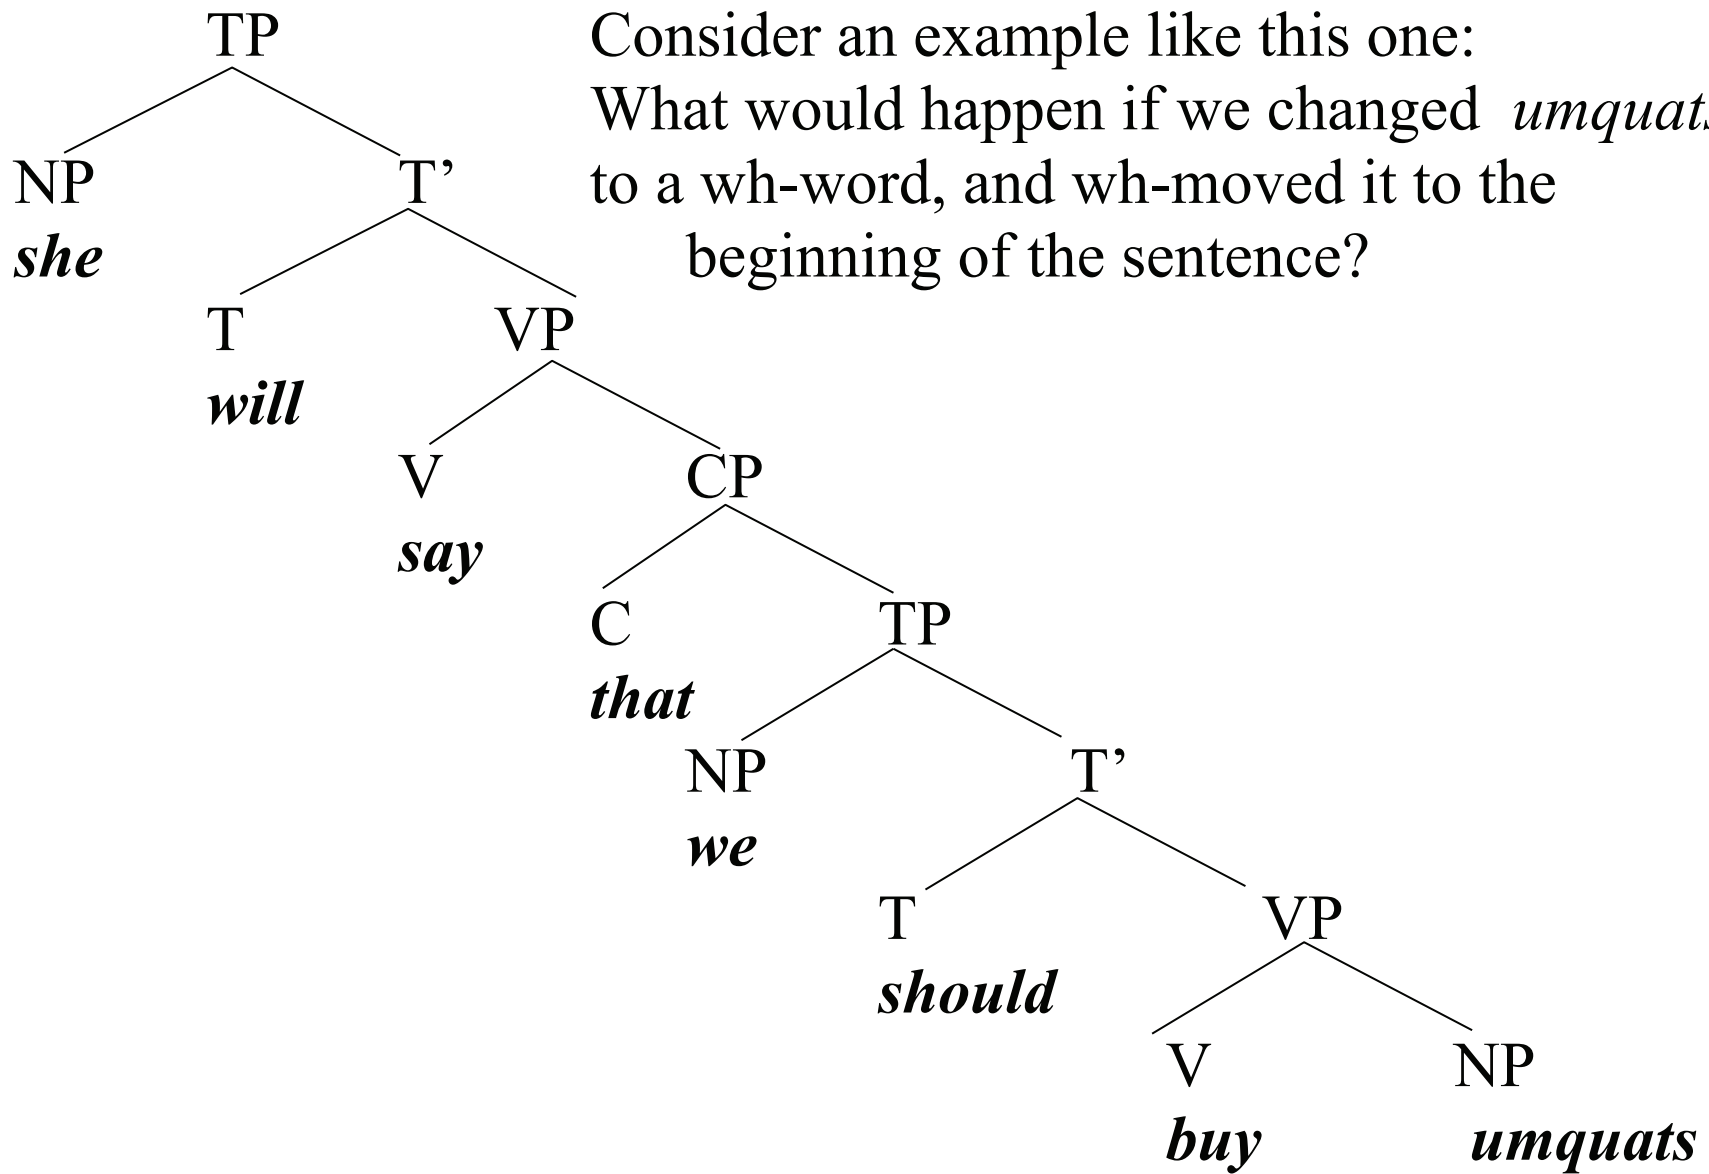

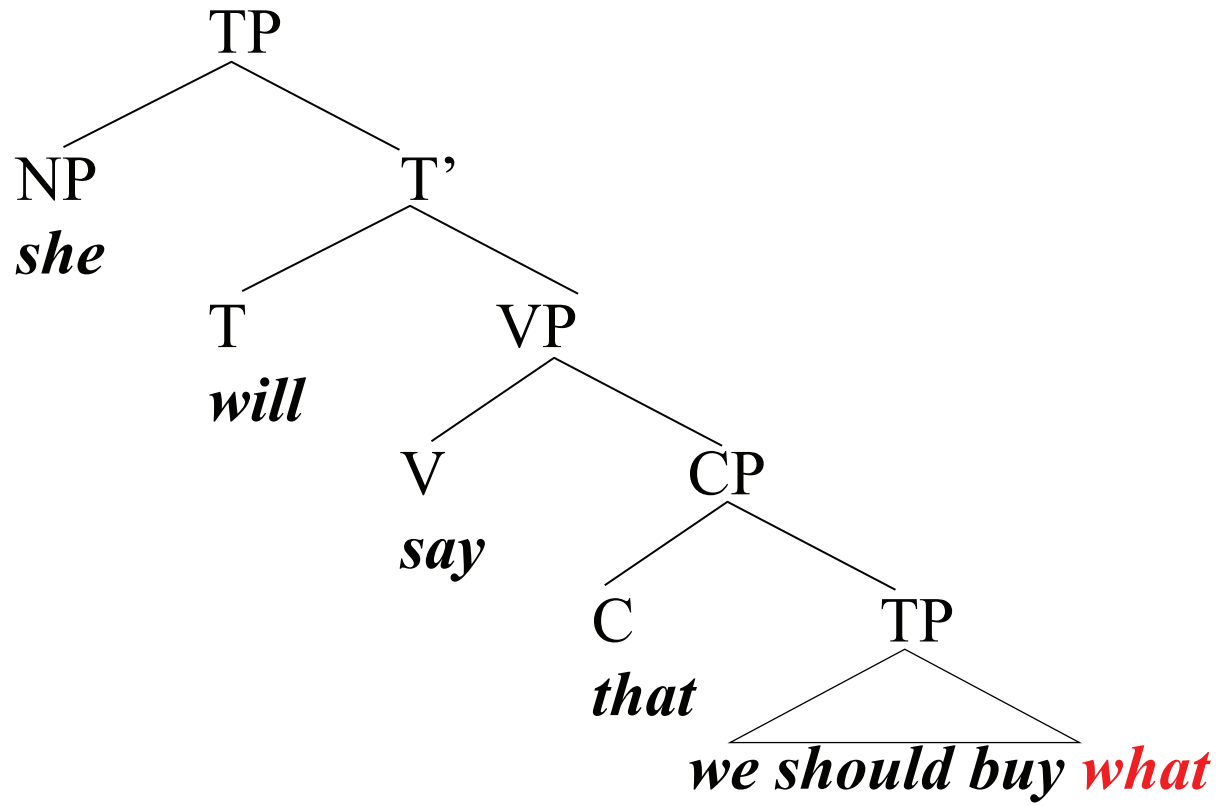

two things potentially wrong with the green arrow:

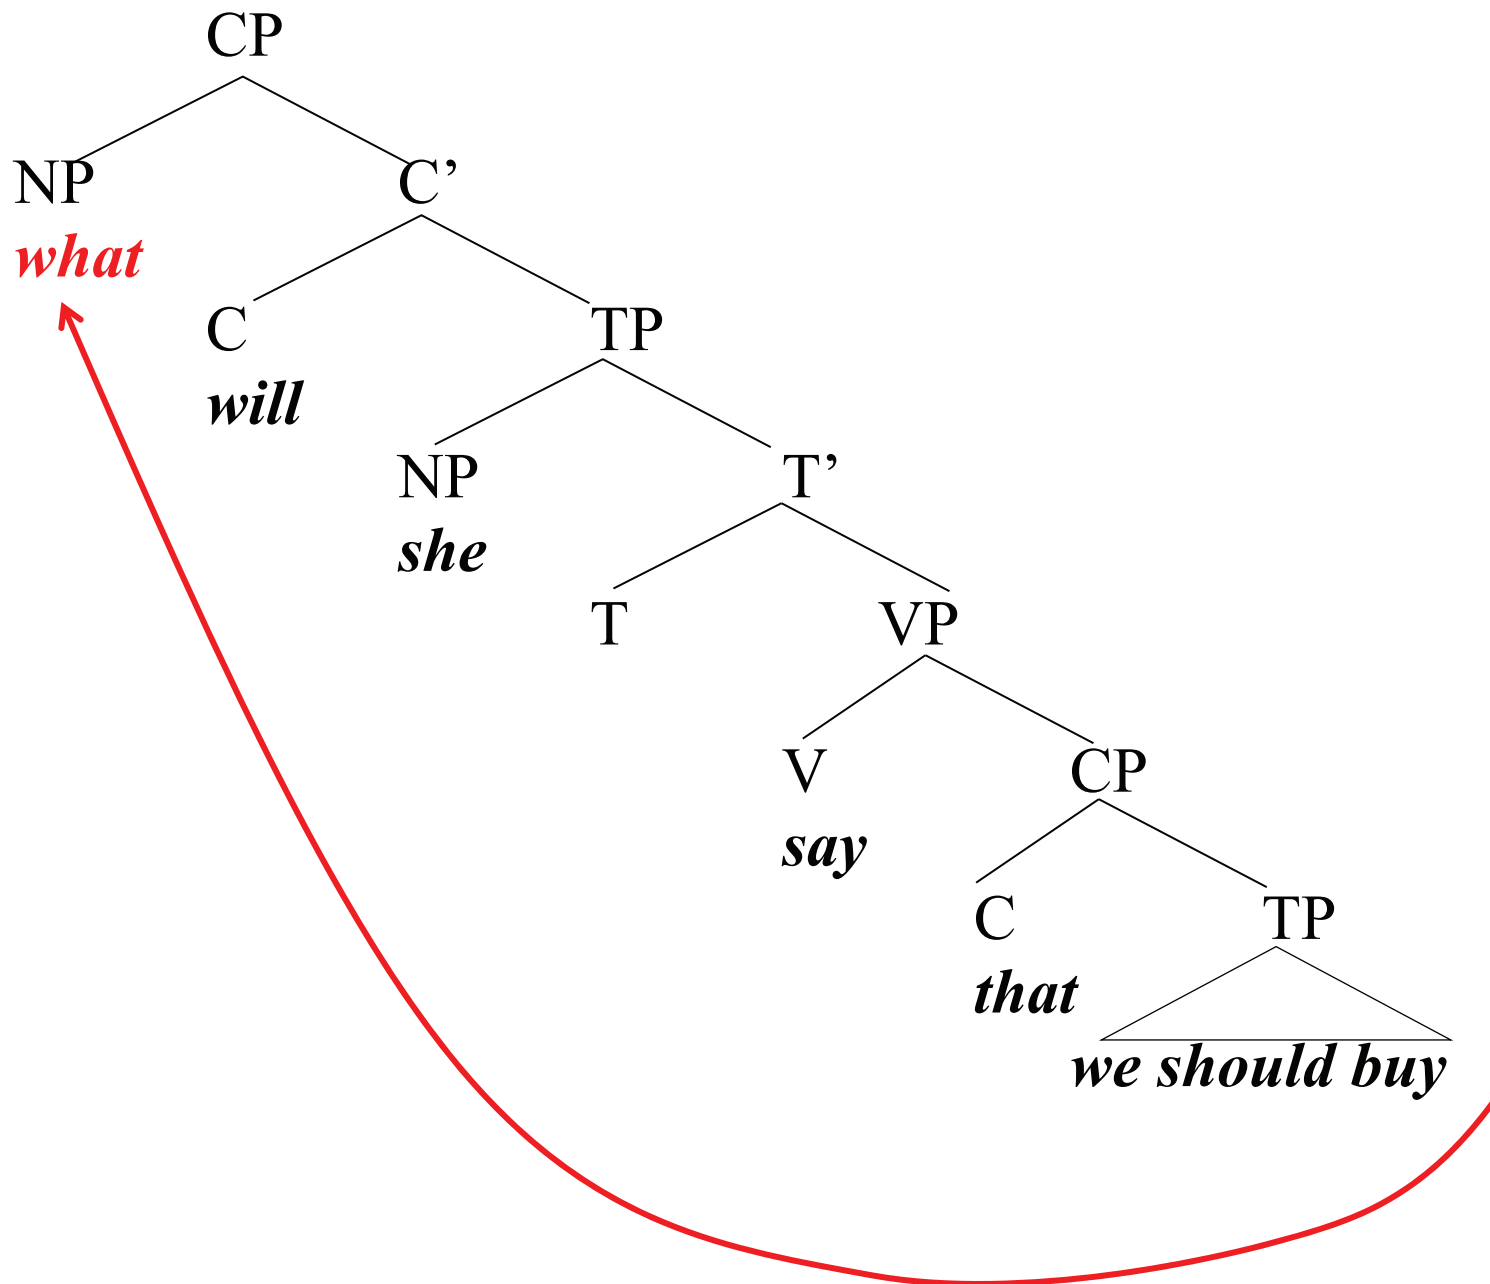

- movement is not of the highest wh-phrase *what*
- movement does not land in the specifier of the embedded CP (which is filled by *what*).

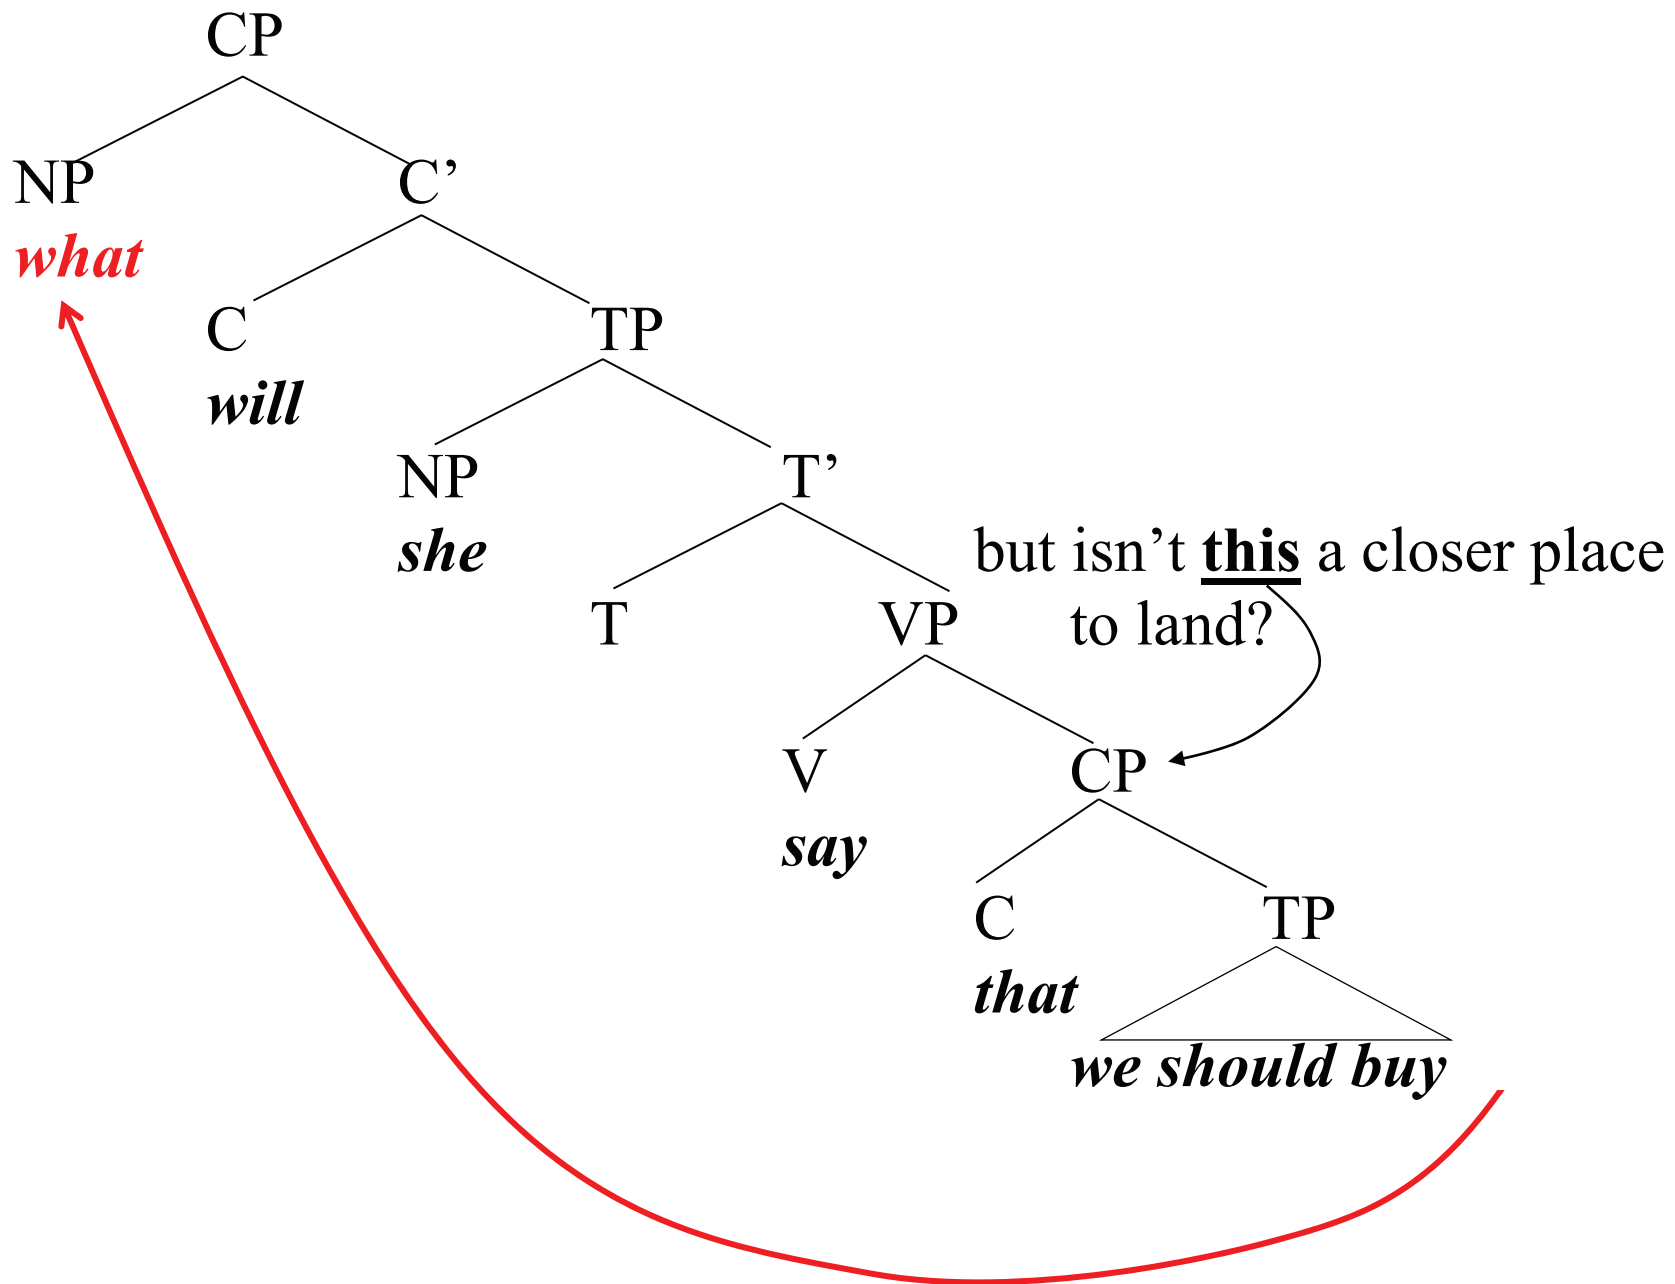

Consider an example like this one:

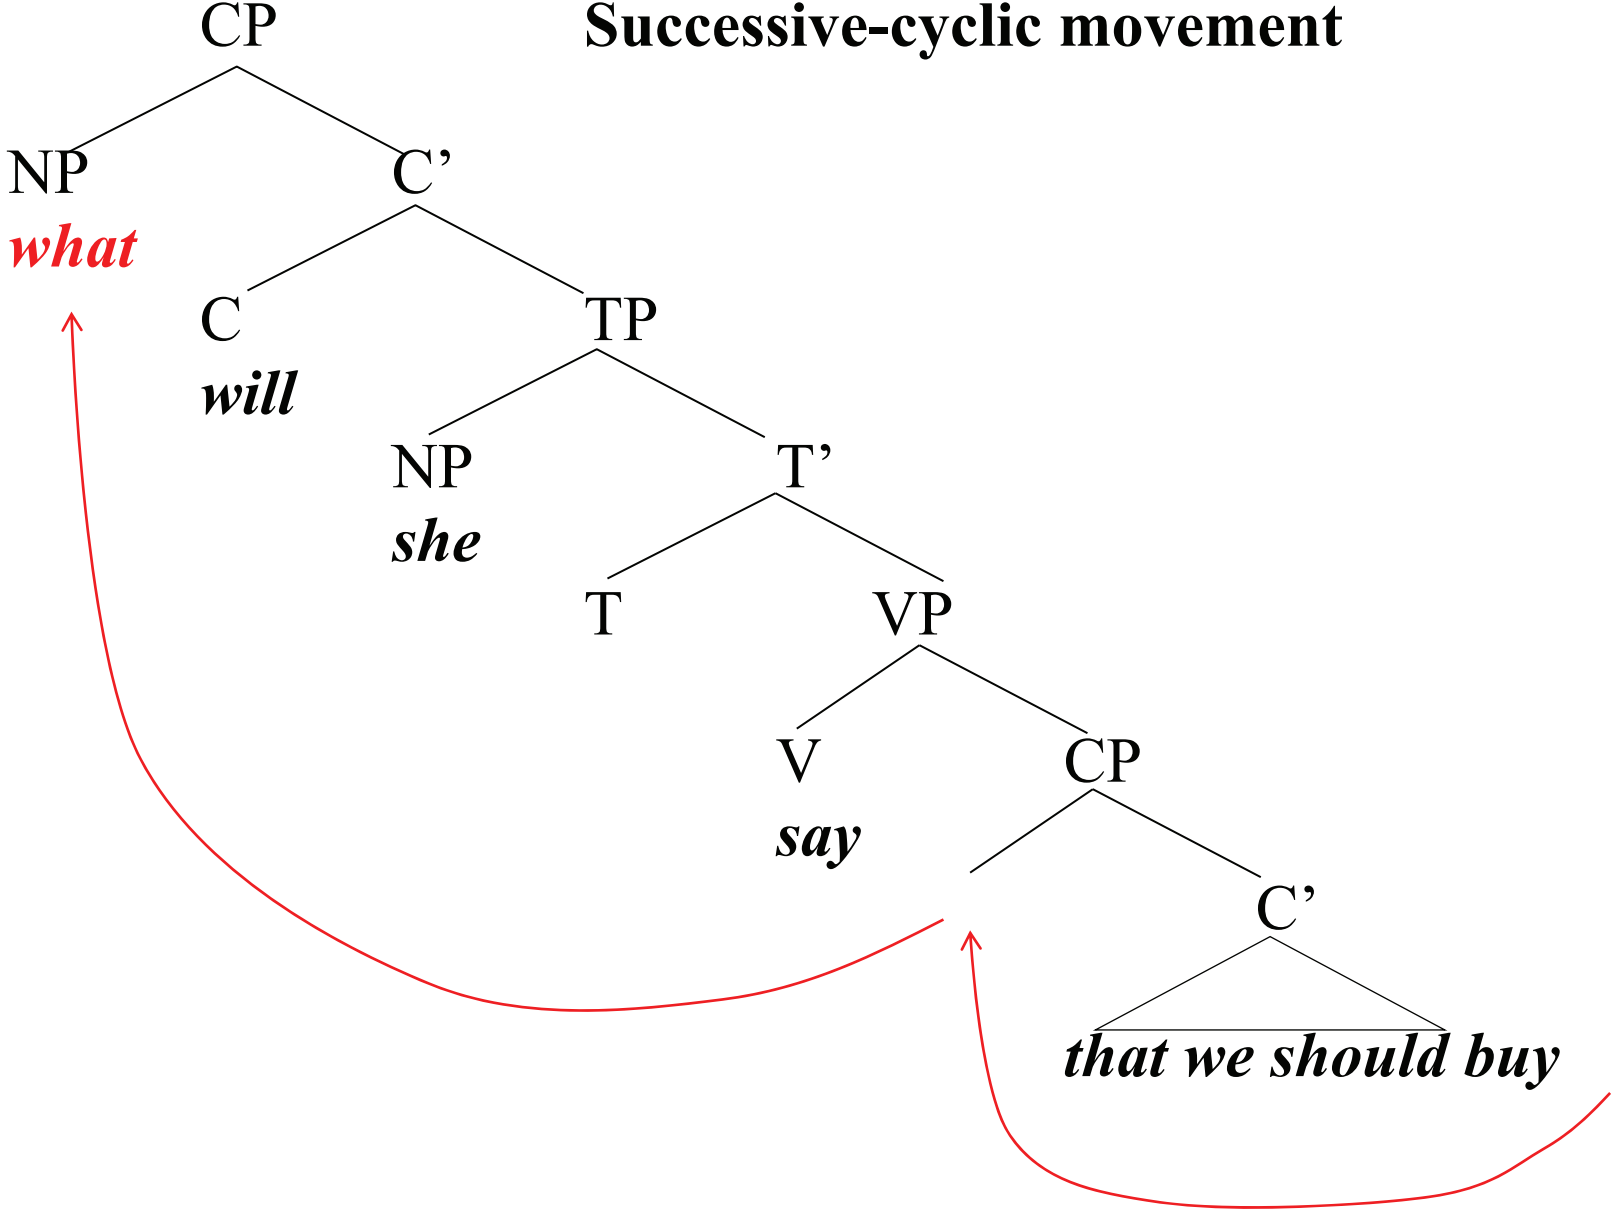

# Successive-cyclic movement

Do we have evidence that this is right? You bet.

## **Dinka**

Dinka is a Nilotic language, spoken in South Sudan and many diaspora communities, by roughly two million people.

## **Dinka**

Dinka is a Nilotic language, spoken in South Sudan and many diaspora communities, by roughly two million people.

Its phonology is...challenging.

## Dinka

Dinka is a Nilotic language, spoken in South Sudan and many diaspora communities, by roughly two million people.

Its phonology is...challenging.

three levels of vowel length:

**cól** ‘mouse’

**cool** ‘charcoal’

**còool** ‘pieces of charcoal’

## Dinka

Dinka is a Nilotic language, spoken in South Sudan and many diaspora communities, by roughly two million people.

Its phonology is...challenging.

three levels of vowel length:

**cól** ‘mouse’

**cool** ‘charcoal’

**còool** ‘pieces of charcoal’

tone, and creaky/breathy voice contrast:

**làang** ‘berries’ (creaky)

**diâar** ‘women’ (breathy)

## Dinka

Càn à-bé Bòl ɯ̀ɔ̀c aléth r̀ò̀k.  
Can G -FUT Bol buy clothes town.LOC  
'Can will buy Bol clothes in town'

Aléth aa-bíi Càn Bòl ɯ̀ɔ̀c r̀ò̀k.  
clothes L -FUT Can.GEN Bol buy town.LOC

ɔ́k à-bíi Càn Bòl ɯ̀ɔ̀c aléth.  
town G -FUT Can.GEN Bol buy clothes

\* à-bíi Càn Bòl ɯ̀ɔ̀c aléth.  
3SG-FUT Can.GEN Bol buy clothes

**Dinka** ...is V2.

**Càn** à-bé Bòl wàc aléth ròk.  
Can G -FUT Bol buy clothes town.LOC  
'Can will buy Bol clothes in town'

**Aléth** aa-bíi Càn Bòlwàc ròk.  
clothes L -FUT Can.GEN Bolbuy town.LOC

**ò'k** à-bíi Càn Bòlwàc aléth.  
town G -FUT Can.GEN Bolbuy clothes

\*   à-bíi Càn Bòlwàc aléth.  
3SG-FUT Can.GEN Bolbuy clothes

## Dinka

There is another position in the Dinka clause that has to be occupied.

ɥèn cé mîr tîŋ  
I AST giraffe see  
'I saw a giraffe'

\*ɥèn cé  tîŋ mîr  
I AST see giraffe

## Dinka

There is another position in the Dinka clause that has to be occupied. Sometimes you have choices about what to occupy it with:

ɥèn cé kitàp yién Ayén  
I AST book give Ayen  
'I gave Ayen a book'

ɥèn cé Ayén yién kitàp  
I AST Ayen give book

\* ɥèn cé  yién Ayén kitàp  
I AST give Ayen book

## Dinka

So Dinka has two positions in the clause that have to get occupied: the specifier of CP, and some **position right before the verb** (let's not worry about where that one is in a tree).

Yàar a-cé Ayén lẹ̀k, yè Bòl a-cé ε`η tuóɔc wụut  
Yaar G - T Ayen told that Bol G - T Deng send cattle.camp  
(LOC)

‘Yaar told Ayen that Bol sent Deng to the cattle camp’

## Dinka

So Dinka has two positions in the clause that have to get occupied: the specifier of CP, and some **position right before the verb** (let's not worry about where that one is in a tree).

Yàar a-cé Ayén lẹ̀k, yè Bòl a-cé ε`η tuóɔc wụut  
Yaar G - T Ayen told that Bol G - T Deng send cattle.camp  
(LOC)

‘Yaar told Ayen that Bol sent Deng to the cattle camp’

Yenà cíi Yàar   lẹ̀k Ayén, yè   cíi Bòl   tuóɔc wụut?  
who T Yaar tell Ayen that T Bol send cattle.camp  
(LOC)

‘Who did Yaar tell Ayen that Bol sent \_\_ to the cattle camp?’

## Dinka

So Dinka has two positions in the clause that have to get occupied: the specifier of CP, and some **position right before the verb** (let's not worry about where that one is in a tree).

Yàar a-cé Ayén lẹk, yè Bòl a-cé ε`η tuóoc wụut  
Yaar G - T Ayen told that Bol G - T Deng send cattle.camp  
(LOC)

‘Yaar told Ayen that Bol sent Deng to the cattle camp’

Yeṇà cíi Yàar   lẹk Ayén, yè   cíi Bòl   tuóoc wụut?  
who T Yaar tell Ayen that T Bol send cattle.camp  
(LOC)

‘Who did Yaar tell Ayen that Bol sent \_\_ to the cattle camp?’

## inka

Yeṅà cí Bôl   ṭiṅ?  
who T Bol.GEN see  
'Who did Bol see?'

Yèyìṅà cí Bôl ké ṭiṅ?  
who.L T Bol.GEN L see  
'Who all did Bol see?'

## Dinka

Yeṅà cí Bôl   t̩iṅ?  
who PST Bol.GEN see  
'Who did Bol see?'

Yèy̩ṅà cí Bôl ké t̩iṅ?  
who.PL PST Bol.GEN PL see  
'Who all did Bol see?'

Yèy̩ṅà y̩i ké t̩ak,   cí Bôl ké t̩iṅ?  
who.PL IMPF SG PL think PST Bol.GEN PL see  
'Who all do you think Bol saw?'

# Semantics

We've had *morphology* :  
building words up out of morphemes  
and *syntax*:  
building sentences up out of words

We've had *morphology* :

building words up out of morphemes  
and *syntax*:

building sentences up out of words

Now for *semantics*:

building meanings up out of...meanings.

Now for *semantics*:

building meanings up out of...meanings.

A going hypothesis: *compositionality*:  
once you specify the meanings of the  
parts of a sentence, you should have the  
meaning of the sentence.

## meaning relations involving words:

- synonymy (purchase, buy)
- antonymy (up, down)

But there are some fancier things  
about meaning...

...for example, consider the various ways we might refer to me:

**Professor Richards**

...for example, consider the various ways we might refer to me:

Professor Richards

Norvin

...for example, consider the various ways we might refer to me:

Professor Richards

Norvin

that guy with the beard

...for example, consider the various ways we might refer to me:

Professor Richards

Norvin

that guy with the beard

that @#\$\* who gave me a C

and so on.

You can typically substitute these for each other in a sentence, and the sentence will still be true (or false, if it was false before):

**Professor Richards** is from Alabama.

You can typically substitute these for each other in a sentence, and the sentence will still be true (or false, if it was false before):

Professor Richards is from Alabama.

Norvin...

That guy with the beard...

getting a little fancier with word meaning:

**intension**: the function for determining the reference of a word/phrase

**extension**: the value of that function

getting a little fancier with word meaning:

President of the US

**intension:** winner of the election

**extension:** Joe Biden

getting a little fancier with word meaning:

the current temperature

**intension:** what the thermometer says

**extension:** 45 degrees (or whatever)

using intensions and extensions:

The temperature is 45 degrees

That guy with the beard is Professor

Richards

using intensions and extensions:

The temperature is 45 degrees

That guy with the beard is Professor

Richards

- 'that guy with the beard' and 'Professor Richards' are (mostly) substitutable for each other...

using intensions and extensions:

The temperature is 45 degrees

That guy with the beard is Professor

Richards

- 'that guy with the beard' and 'Professor Richards' are (mostly) substitutable for each other...

so how about 'the temperature' and '45 degrees'?

using intensions and extensions

The temperature is rising.

using intensions and extensions

The temperature is rising.

45 degrees is rising.

oops.

using intensions and extensions:

**intension**

The temperature is rising

The temperature is 45°

**extension**

## meaning relations involving sentences:

- entailment

John killed the ant.

The ant is dead.

A entails B if whenever A is true, B is true.

## meaning relations involving sentences:

- entailment

John killed the ant.

The ant is dead.

Norvin is Don's nephew.

Don is Norvin's uncle. (assuming both are male)

## meaning relations involving sentences:

- entailment

John killed the ant.

The ant is dead.

Norvin is Don's nephew.

Don is Norvin's uncle.

If John is here, then Mary is here, and John is here.

Mary is here.

## meaning relations involving sentences:

- entailment

careful! entailment relations aren't about whether the sentences actually are true:

Joe Biden is a bachelor

Joe Biden is unmarried

## meaning relations involving sentences:

- equivalence

A and B are in an **equivalence** relation if they entail each other.

Mary ate the bagel.

The bagel was eaten by Mary.

## meaning relations involving sentences:

- contradiction

A and B **contradict** each other if each entails that the other is false.

Noam is here.

Noam is not here.

## meaning relations involving sentences:

- presupposition

The present king of France is bald.

## meaning relations involving sentences:

- presupposition

The present king of France is bald.

There is a present king of France.

## meaning relations involving sentences:

- presupposition

crucially different from entailment, in that A's presuppositions remain if we negate A, wonder about A, etc...

The present king of France is bald.

The present king of France is **not** bald.

Is the present king of France bald?

→ There is a present king of France.

## meaning relations involving sentences:

- presupposition vs. entailment:

The present king of France is bald.

**entails:** he has no hair.

## meaning relations involving sentences:

- presupposition vs. entailment:

The present king of France is bald.

**entails:** he has no hair.

The present king of France is **not** bald.

Is the present king of France bald?

→ lack this entailment.

Your reaction to a presupposition will vary, depending on the presupposition...

For example\*, if we hear scratching at the door, I could say:

**The cat is at the door**

\*[example taken from Kai von Fintel, lecture notes]

Your reaction to a presupposition will vary, depending on the presupposition...

For example\*, if we hear scratching at the door, I could say:

**The cat is at the door**

Here **the** triggers a presupposition: *There is a cat.*

Even if you didn't know I had a cat, you might *accommodate* this presupposition; you didn't know I had a cat, but now you do.

\*[example taken from Kai von Fintel, lecture notes]

Your reaction to a presupposition will vary, depending on the presupposition...

For example\*, if we hear scratching at the door, I could say:

**The cat is at the door**

Here **the** triggers a presupposition: *There is a cat.*

Even if you didn't know I had a cat, you might *accommodate* this presupposition; you didn't know I had a cat, but now you do.

On the other hand, if I say:

**The giraffe is at the door. ...**

\*[example taken from Kai von Fintel, lecture notes]

more fun with presuppositions:

Have you stopped beating your wife?

more fun with presuppositions:

Have you stopped beating your wife?

I regret having been born in 1857.

more fun with presuppositions:

Have you stopped beating your wife?

I regret having been born in 1857.

(okay, fine. I don't regret having been born in 1857, then.)

## meaning relations involving sentences:

- **implicature:** something you would generally infer from hearing a sentence, though it may not be true.

## meaning relations involving sentences:

- implicature

### Utterance

"Can you open the window?"

### Implicature

Speaker wants you  
to open the window.

## meaning relations involving sentences:

- implicature

### Utterance

"Can you open the window?"

"Where's the salt?"

### Implicature

Speaker wants you  
to open the window.

Speaker wants salt.

## meaning relations involving sentences:

- implicature

### Utterance

"Can you open the window?"

"Where's the salt?"

"I'm 21"

### Implicature

Speaker wants you to open the window.

Speaker wants salt.

Speaker is exactly

.

## meaning relations involving sentences:

- implicature

### Utterance

"Can you open the window?"

"Where's the salt?"

"I'm 21"

"Mary ate some of the cookies." She didn't eat  
them all.

### Implicature

Speaker wants you  
to open the window.

Speaker wants salt.

Speaker is exactly

.

## meaning relations involving sentences:

- implicatures can be cancelled.

### Utterance

### Implicature cancelled

"Can you open the window?" "...I'm studying physical fitness in MIT students"

"Where's the salt?" "...I'm making a map of the kitchen"

"I'm 21" "...in fact, I'm 50."

Utterance

“Mary ate some  
of the cookies”

Implicature cancelled

“...in fact, she may  
have eaten all of them.”

...presuppositions, on the other hand, can't be cancelled:

The king of France is bald...  
...oh, and, by the way, there is no  
king of France.

summarizing:

a sentence A's...

- entailments: have to be true if A is true.

summarizing:

a sentence A's...

- entailments: have to be true if A is true.
- presuppositions: have to be true if A is true, or if A is false, or...

summarizing:

a sentence A's...

- entailments: have to be true if A is true.
- presuppositions: have to be true if A is true, or if A is false, or...
- implicatures: are probably true if A is true, but might be false, and can be cancelled.

or, to put it another way:

is P an entailment, a presupposition, or an implicature of A?

or, to put it another way:

is P an entailment, a presupposition, or an implicature of A?

- Does P have to be true if A is true or false (or questioned, etc...)?  
→ **Presupposition**

or, to put it another way:

is P an entailment, a presupposition, or an implicature of A?

- Does P have to be true if A is true or false (or questioned, etc...)?  
→ **Presupposition**
- Does P have to be true if A is true?  
→ **Entailment** (if it's not a presupposition)

or, to put it another way:

is P an entailment, a presupposition, or an implicature of A?

- Does P have to be true if A is true or false (or questioned, etc...)?  
→ **Presupposition**
- Does P have to be true if A is true?  
→ **Entailment** (if it's not a presupposition)
- if not:  
→ **Implicature**

Practice:

Bill isn't aware that Susan is pregnant.

## Practice:

Bill isn't aware that Susan is pregnant.

Susan is pregnant.

You should tell Bill.

## Practice:

Bill isn't aware that Susan is pregnant.

Susan is pregnant. → **presupposition**

You should tell Bill. → **implicature**
